Build faster with Agent Mode

Use Agent Mode to transform the way you work with APIs.

Get your API working

Fix configurations, scripts, or anything else to get your request working.

Document

Describe what type of documentation you'd like, and watch Agent Mode do the rest.

Explore

Let Agent Mode configure requests and identify use-cases.

And much more!

Use Agent Mode across Flows, Monitors, Mocks, and more!

By using this AI product, you agree to Postman's [Terms of Service](#)

Output:

Beautified output:

Section	Content	
Title	Business Analysis Review – User Story	
User Story (Excerpt)	"To fetch the ID, Summary and description only text"	
Overall Score	69 / 100	
Overall Rating	The story is technically feasible but currently lacks the structure and business context required for a regulated healthcare project. With the recommended refinements, it can become a robust, testable requirement aligned with compliance and operational goals.	
Parameter	Description	Score (Out of 20)
Clarity	The statement is understandable but lacks context (e.g., who is the actor, why the data is needed). It reads more like a technical note than a user story.	14

Section	Content	
Completeness	No acceptance criteria, pre-conditions, or constraints are defined. The story does not specify the expected output format or error handling.	10
Business Value Alignment	The story does not articulate how this data extraction supports patient safety, compliance, or operational efficiency. It appears to be a generic data-access task.	12
Testability	QA can run the script and compare the printed values against expected values, but without acceptance criteria the test scope is ambiguous.	15
Technical Feasibility	The code is syntactically correct and uses standard Python libraries. It is implementable within a typical healthcare IT environment.	18
